Description	Scarlet, single flowers

Catchfly

Latin name	Silene armeria 'Electra'
Colour of flower	Bright Pink, Blue
Height	30 – 60cm
Position	Full Sun
Description	Clusters of bright pink flowers

Creating your Superbloom Garden

- 1. Pick your plot:** The Superbloom seeds will grow best in open, sunny sites that are not overshadowed by buildings or large trees. They could be sown in the soil or in pots and window boxes.
- 2. Choose your seeds:** Use this guide to help you decide which seeds you would like to sow. Use them all for a large display or choose your favourites. You could design your Superbloom on a theme such as colour or the different types of pollinators the flowers will attract.
- 3. Get sowing:** March to April is the best time to sow your seeds.

For further information about the different species in your Superbloom mixes, detailed instructions for sowing and many more free resources for schools and community groups visit hrp.org.uk/superbloomschools or hrp.org.uk/superbloomcommunities

We'd love to see your gardens as they grow.
